EDGE ANALYTICS FOR BROADCASTING NETWORK MONITORING SYSTEMS

How to create the virtual environment

If is not already installed, install the library virtualenv running the command
   pip install virtualenv

Now, create or go into the folder in which you want to create the virtual environment and run this command: *python<version> -m venv <virtual-environment-name>*

In order to use the virtual environment, you must activate it. In the folder in which has been created run:
For mac: *source <virtual-environment-name>/bin/activate*
For windows:
   In CMD: *<virtual-environment-name>*/Scripts/activate.bat
   In Powershell: *<virtual-environment-name>*/Scripts/Activate.ps1

In order to install all the libraries from the requirements.txt file, run this command:
   pip install -r requirements.txt

Now, you should be able to run the python scripts in the virtual environment.
In order to deactivate the virtual environment, use the command *deactivate* .
